

Going Solar is easy...

When you convert to solar hot water.

- your power charges reduce,
- you are saving the planet,
- you are harnessing energy that costs nothing.

Installation is by craftsmen plumbers..

We can arrange finance for you..

Free Energy Assessment

Quadrix Energy offers a free energy assessment to determine your household or business usage. From this we prepare your personalised energy savings plan that addresses your specific environment.

Contact Brigid right now to start saving:

brigid@quadrix.co.nz

or phone (07) 895-5952

to arrange an appointment.

Important Information

- Power prices are increasing.
- The National Grid is at capacity.
- Natural Gas is running out.
- Nuclear Power produces toxic waste.
- Dams are too expensive and damage the ecosystem.
- Burning fossil fuel causes pollution

Solar energy arrives FREE on your roof every day from the largest nuclear power plant in the solar system, the sun.

Act NOW to secure our future.

YOU CAN MAKE A DIFFERENCE.

Quadrix Energy

**You and Quadrix Energy,
cleaning up the planet together.**

Microsolar

*The world's only coaxial
vacuum tube multi-valve
solar hot water heater*

Simply Superior

USA Patent No. 6.014.968

European Patent EP 0852689 B1

The Microsolar difference

Technically Superior

World patented technology.

Environmentally Friendly

Reduces CO₂ emissions by about three tonnes per year (about the same amount produced by an average car)

Long Life

Systems last up to twice as long as a standard hot water cylinder.

Energy Saving

Uses no electricity.

Applications

- Residential
- Commercial
- Industrial
- Agricultural
- Swimming and SPA Pools
- Under-floor and Space Heating

Configurations

- Preheater
- Pumped System
- Wetback Connection

Easy Maintenance

We service your tubes every 5 years under our optional maintenance plan.

Finance

Credit is available. Normal lending criteria applies.

Microsolar is proudly sold in New Zealand exclusively by Quadrix Energy

The Greenhouse Effect

Light enters an environment where it strikes a surface and is converted to heat energy. The heat produced cannot escape because it cannot pass through a vacuum, thus the environment heats up.

Constructed like a thermos flask, the inner tubes are specially coated to provide excellent absorption of solar energy. Light striking the coating is converted to heat, therefore the tubes work even on cold cloudy days.

Tests confirm that:

Microsolar tubes withstand temperatures as low as -32 °C without freezing, proving that the tubes are still working at subzero temperatures.

More Hot Water

Microsolar tubes provide an increased efficiency of 15-18% over other systems.

Tough

Microsolar tubes withstand hail stones up to 25mm diameter.

Durable

The coating will last for twenty years extending the life of the heat collectors.

Safe

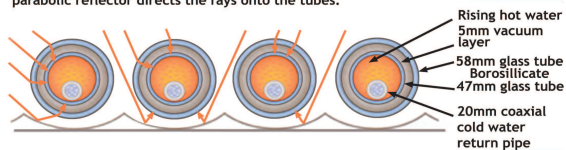

A copper heat exchange coil delivers hot water free from contaminants. Water stored in the Microsolar tank does not enter your water supply.

Effective

The cylinder is insulated by pressure injected, high density, environmentally safe, 50 mm, CFC free polyurethane foam.

MICROSOLAR hot water heaters are trusted globally

Diffuse radiation from all angles is absorbed instead of being reflected and the parabolic reflector directs the rays onto the tubes.

Microsolar

Only From

Quadrix Energy

A MICROSOLAR system can heat your swimming pool in summer and help drive your under floor heating in winter.
